

Are You Prepared for Class?

American schools are increasingly vulnerable to crime and violence. According to the National Education Association, "Every hour of every school day, 900 teachers are threatened and 2,000 students and 40 teachers are physically attacked on school grounds."

Ritron® can help you make your school safe for students and staff. Our wireless system provides notification via radio *directly* to SROs, outside law enforcement and fire departments. There are no delays as associated with third party call monitoring centers or even 911...

At the push of the Button mounted discreetly nearby, your pre-recorded message transmits immediately to the principal's office, school security officer, or other emergency personnel up to a few miles away.

Go Beyond Normal Limits...™

Carmel, Indiana USA

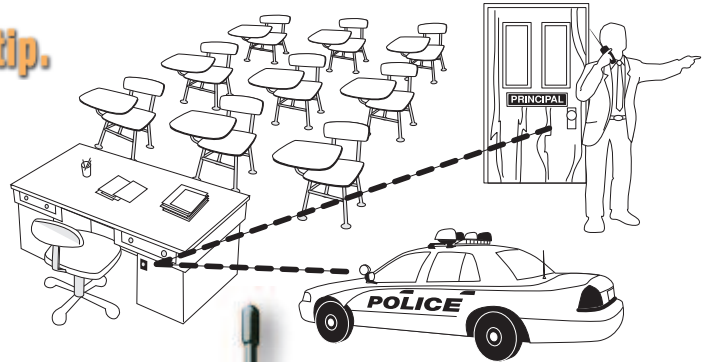

Immediate Assistance is at Your Fingertip.

It all starts with an incredible product that we call the Quick Talk. At the push of the Button or other switch, it sends your pre-recorded message directly to the principal's office, School Resource Officer, outside law enforcement agency, fire and rescue department, or to all simultaneously!

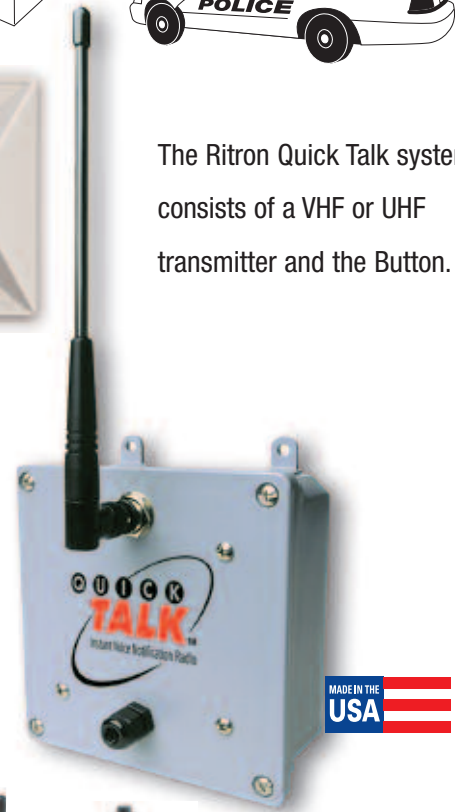

Quick Talk can tell you when and where immediate assistance is required. Your pre-recorded messages, such as "assistance needed in classroom 22", are instantly transmitted to VHF or UHF radios up to a few miles away.

Along with location information, the emergency message is transmitted directly to your first responders equipped with 2-way radios. And our wireless technology is based on airtime free systems with no monthly monitoring fees.

The Button can be installed on a desk, under a counter, or on any surface. Ideally, the Button is installed in administrative offices, classrooms, or wherever instant alerting is needed. With dimensions comparable to a desktop calculator, Quick Talk is easily concealed. Using standard AA alkaline batteries, the system is effective for thousands of transmissions.

The Ritron Quick Talk system consists of a VHF or UHF transmitter and the Button.

Control Unauthorized Access

Effective security means controlled access. During classroom hours, all doors except the monitored main entrance should be locked. But doors can be propped open. The solution is a low-cost door sensor with automatic radio-reporting capability.

The Quick Talk is activated only after the door remains open for a predetermined interval. When activated, the Quick Talk broadcasts your message, such as "emergency exit door open", over the school network.

Liberty Repeater

Mobile Radio

Base Station

Portable Radio

Outpost Callbox

Ritron manufacturers companion American made 2-way radios for use with the Quick Talk. We also offer our industry standard Callbox wireless intercom for use at entry doors, in parking lots, and remote campus areas.

For nearly 30 years Ritron has been designing and manufacturing reliable wireless communication products for professionals worldwide. Our products work together as a system and are fully compatible with virtually any other brand of two-way radio.
